

# Heavy-Duty Submersible Slurry Pump

This heavy-duty submersible slurry pump is designed for demanding applications such as mining and construction. It features wear-resistant materials, a powerful motor, and an optimized impeller for reliable performance and high flow rates.

## Product Overview

### High-Performance Slurry Management

This heavy-duty submersible slurry pump is engineered for the most demanding industrial and mining environments. Built with high-grade wear-resistant materials, it excels at transporting abrasive solids and high-concentration slurries. Its robust motor and optimized impeller design ensure consistent high-flow performance, providing reliable operation in harsh wastewater treatment and construction applications.

## Key Features

### Operational Strengths

- Handles abrasive solids
- Processes high concentration slurry
- Supports viscous fluid pumping
- Optimized for high flow rates

### Primary Applications

Mining, Construction, Industrial Wastewater

## Technical Specifications

### Build Quality

Heavy-duty • Wear-resistant • Submersible

### Performance Highlights

**100 %**

Solid Handling Efficiency
