Product Overview

Robust Trailer Bogie System

This heavy-duty trailer bogie assembly is engineered for superior load distribution and structural stability in demanding transport environments. Featuring an advanced multi-leaf spring suspension system, it provides exceptional shock absorption for a smoother ride and increased cargo protection. The construction utilizes high-strength steel throughout, ensuring maximum durability and longevity for heavy-duty trucking and specialized trailer applications.

Technical Specifications

Key Components

- Heavy-duty axles
- Integrated brake assemblies
- Reinforced support structures
- Cylindrical rubber shock elements

Suspension System

Multi-leaf spring

Construction Material

High-strength steel

Application & Compliance

Performance Ratings

Shock Absorption • High Load Capacity • Reliable Braking

Primary Applications

Heavy-duty trucking, Trailer manufacturing, Logistics transport
