Product Overview

Professional Machinery Transport Solution

These heavy-duty roller skids are engineered to facilitate the efficient movement of heavy machinery and industrial equipment of all shapes and sizes. Featuring a robust, durable construction with high-quality steel rollers, they minimize friction and effort during relocation. Designed for stability and reliability, these skids are an essential tool for demanding industrial environments where precision and heavy load support are required.

Technical Specifications

Application Compatibility

- Machinery Relocation
- Equipment Transport
- Industrial Site Logistics

Performance Highlights

1 Level

Friction Reduction

1 High

Stability Rating

Design Features

Heavy-Duty Construction, Multi-Roller System, Industrial Grade, High Load Stability
