

High-Density Patch Panel for Broadcast Applications

This high-density patch panel is designed for radio and TV broadcasting applications. It features multiple RJ45 ports for connecting various audio and video equipment.

Product Overview

High-Density Broadcast Connectivity

This high-density patch panel is purpose-built for the rigorous demands of professional radio and television broadcasting environments. Its rack-mountable design allows for seamless integration into existing studio infrastructure, while the robust construction ensures long-term reliability and signal integrity. Featuring clearly numbered ports, it simplifies cable management and enables rapid identification of complex audio and video connections.

Technical Specifications

Port Identification

Numbered Ports • Cable Management Ready

Key Capabilities

- High-density port configuration
- Durable rack-mount construction
- Optimized for A/V signal routing

Interface Type	RJ45
Form Factor	Rack-mountable
Application Compatibility	Radio Broadcasting, TV Broadcasting, Professional Studios
