

High-Frequency Audio Amplifier

This is a high-frequency signal amplifier for audio-video use. It features low noise amplification and stable performance.

Product Overview

High-Frequency Audio Amplifier

This high-frequency signal amplifier is engineered for audio-video applications requiring reliable signal processing. Designed for stability and low noise, it ensures consistent audio output performance. This component is highly suitable for integration into a wide variety of electronic information products.

Technical Specifications

Supply Voltage

5 V

Operating Voltage

Interface Designations

- IN (Input)
- OUT (Output)

Key Performance Attributes

Low Noise, Stable Performance, High Frequency

Model ID

SGLNA1258-20
