

High-Gain Multi-Element TV Antenna

This high-gain TV antenna is designed to receive over-the-air broadcast signals. Its multi-element design enhances signal reception and improves picture quality.

Product Overview

High-Performance Broadcast Reception

This high-gain multi-element TV antenna is engineered to provide superior over-the-air signal reception for both VHF and UHF frequency bands. Its specialized design effectively captures distant signals, resulting in significantly improved picture clarity and stable transmission. Built for durability, the unit is constructed with robust materials designed to withstand harsh outdoor weather conditions for long-term reliable performance.

Technical Specifications

Frequency Bands	VHF, UHF
Reception Capability	High-Gain Multi-Element

Construction

Environment
Outdoor • Weather-resistant
