

High-Intensity Discharge Work Light

This high-intensity discharge (HID) work light is designed for various applications. The light features a robust construction with a large reflector for enhanced beam projection and an ergonomic handle for comfortable handling.

Product Overview

High-Intensity Discharge Work Light

This high-intensity discharge (HID) power light is engineered for demanding professional environments where reliable, high-output illumination is critical. Featuring a robust construction and a large reflector, it is designed to maximize beam projection and durability. The unit includes an ergonomic handle for comfortable handling during extended use, making it an ideal tool for various industrial and field applications.

Technical Specifications

Suitable Environments

- Professional industrial use
- Demanding outdoor environments
- Field operations

Light Source	High-Intensity Discharge (HID)
Design Features	Robust Construction, Large Reflector, Ergonomic Handle
