

High-Intensity LED Array Module

This high-intensity LED array module is designed for uniform illumination. It features a robust housing for durability and protection of internal components.

Overview

High-Intensity LED Array Module

This high-intensity LED array module is engineered to provide uniform, consistent illumination across a wide area. Its rectangular grid configuration ensures even light distribution, making it an ideal solution for demanding lighting applications. Built with a robust housing, the module offers enhanced durability and protection for its internal components, ensuring long-term reliability in various professional environments.

Technical Specifications

Housing Quality

Robust Housing • Durable Construction

Suitable Applications

- Uniform illumination tasks
- High-brightness environments
- Even light distribution setups
