

High-Output Professional Loudspeaker System

This professional loudspeaker system is designed for sound reinforcement applications. It utilizes a low-frequency driver and a horn-loaded compression driver to provide extended bass response and clear sound.

Product Overview

Professional Sound Reinforcement

This high-output loudspeaker system is engineered for demanding professional audio environments including live music venues and theaters. It utilizes a large-format low-frequency driver paired with a horn-loaded compression driver to deliver articulate vocals and powerful bass. The enclosure design balances durability with flexibility, making it an ideal choice for both permanent installations and portable sound reinforcement needs.
