

High-Performance Gasoline Engine for Machinery

This high-performance gasoline engine is designed for various machinery applications. It features efficient cooling, durable construction, and a user-friendly recoil start.

Overview

High-Performance Gasoline Engine

This high-performance gasoline engine is engineered for versatility and reliability across various machinery applications. Featuring a compact and durable construction, it integrates seamlessly into small to medium-sized equipment. The design prioritizes efficiency with an optimized combustion chamber for lower emissions and a high compression ratio for superior fuel economy.

Performance & Design

Key Design Features

- Compact and lightweight frame
- Efficient cooling system
- Optimized combustion chamber
- Low-maintenance lubrication system

Performance Metric

1 Optimized

High Compression Ratio

Operation & Standards

Starting Mechanism

Recoil start

Certifications

CE, VA, FMC
