

High-Performance Water Transfer Pump

These water transfer pumps are engineered for high-performance water transfer applications. Their durable construction and self-priming capability make them suitable for irrigation, construction, and general water removal.

Overview

High-Performance Water Transfer Solution

This high-performance water transfer pump is designed for efficiency and reliability in demanding environments. Featuring a concise and lightweight frame, it is engineered for easy start-up and straightforward operation. The unit includes protective rubber stents on the fuselage to ensure durability during use.

Design & Build

Design Features

Lightweight, Concise Design, Easy Start, Rubber Stent Protection

Performance

Key Performance Indicators

1 Included

Oil Alarm System

Operation

Operational Highlights

- Easy to operate
- Recoil start mechanism
- Integrated oil alarm for engine protection
