

High Pressure Washer Motor

This high-pressure washing machine motor provides reliable and efficient power for demanding cleaning tasks. It features robust construction with copper windings for enhanced durability and performance.

Product Overview

High-Performance Washer Motor

This high-pressure washing machine motor is engineered to deliver reliable and efficient power for demanding cleaning environments. Built with high-quality copper windings, it ensures enhanced durability and consistent performance over long operational periods. The unit features a robust gear mechanism encased in a reinforced plastic shell, providing smooth power transmission and protection against external elements.

Construction & Design

Winding Material	Copper
Casing Material	Reinforced Plastic
Electrical Connections	Insulated Connectors

Performance Features

Application Suitability

High-Pressure Washing • Demanding Cleaning Tasks

Key Features

Copper Windings, Robust Gear Mechanism, Reinforced Casing, Insulated Terminals
