

High-Rise Water Supply Pump

High-rise water supply pump designed for efficient and reliable water distribution in multi-story buildings. Engineered to provide consistent pressure and flow rates, ensuring adequate water supply to all levels of the building.

Product Overview

High-Rise Water Supply Solution

The LG, LGR and DL, DLR series pumps are engineered for efficient and reliable water distribution in multi-story buildings. Designed to provide consistent pressure and flow rates, these units ensure adequate water supply to all levels of a structure. Their durable construction and advanced hydraulic design minimize maintenance needs while delivering long-lasting performance for residential, commercial, and industrial applications.

Series Information

Available Series

LG, LGR, DL, DLR

Application

Suitable Sectors

Residential • Commercial • Industrial

Primary Application

High-rise building water supply systems
