

# High-Speed Coin Sorter and Counter

The Coin Sorter and Counter is a high-speed machine designed for processing large volumes of coins. It efficiently sorts mixed coins into individual denominations, counts the total value of each denomination, and provides a comprehensive report.

## Overview

### High-Speed Coin Processing Solution

This high-speed coin sorter and counter is designed for businesses that require efficient and accurate processing of large volumes of coinage. It automatically sorts mixed coins into individual denominations while simultaneously calculating the total value, providing comprehensive reporting for auditing purposes. Built for reliability in demanding environments like banks and retail, the machine features robust construction, advanced counterfeit detection, and a user-friendly interface. Its compact, quiet design ensures seamless integration into any professional workspace.

## Key Features

### Operational Capabilities

- Automatic sorting of mixed coins
- Real-time value calculation per denomination
- Advanced counterfeit detection
- Adjustable sorting speeds
- Customizable batch settings
- Automatic jam clearance system

### Performance Metrics

**1 Automatic**

Jam Clearance

**1 Advanced**

Counterfeit Detection

## Technical Specifications

### Design Attributes

Attribute	Description
Noise Level	Quiet Operation
Form Factor	Compact Design
Data Management	Built-in Memory Function

### Ideal For

Banks, Retail Businesses, Vending Machine Operators, Financial Offices
