

High Speed Metal Sheet Roll Forming Machine

This high-speed roll forming machine efficiently shapes metal sheets into precise profiles. It features a robust construction and advanced control systems to ensure high productivity and accuracy.

Overview

High-Efficiency Roll Forming Solution

This high-speed roll forming machine is engineered for the steel structure and cold roll forming industry, offering a seamless integration of mechanical, electrical, and hydraulic systems. Designed for full automation, the main frame features a double-layer configuration capable of producing diverse metal profiles with high precision. It serves as an ideal solution for manufacturing roofing panels, wall panels, and various structural profiles with consistent quality and high output.

Technical Capabilities

Automation	Full Automatic
Integrated Systems	Mechanical, Electrical, Hydraulic
Frame Design	Double Layer

Certifications

Compliance & Standards

CE • ISO 9001 • UKAS

Operational Features

Operational Features

- Adjustable forming speeds
- Automated material feeding
- Integrated cutting system
- Modular design for customization
