

High-Speed Paper Cup Forming Machine

This high-speed paper cup forming machine is designed for efficient paper cup production. It integrates automatic paper feeding, heating, forming, and cup ejection processes to ensure consistent quality and high output.

Overview

High-Performance Cup Production

This high-speed paper cup forming machine is engineered for the efficient, large-scale production of paper cups. It integrates automated processes including paper feeding, heating, forming, and ejection to ensure consistent output quality. Designed with a robust mechanical structure and an intuitive control panel, it offers precise operation and easy adjustments for various cup sizes and shapes.

Technical Specifications

Automation Capabilities

- Automatic paper feeding
- Automated heating system
- Precision forming process
- Automated cup ejection

Model Number	JBZ-D30
Operational Features	High-speed production, Robust mechanical structure, User-friendly control panel, Consistent quality output
