

High-Speed Steel Milling Cutter

This circular milling cutter features fine teeth for precision cutting and shaping. It is made of high-speed steel (HSS) for durability and heat resistance during machining.

Product Overview

High-Speed Steel Milling Cutter

This high-speed steel (HSS) milling cutter is engineered for precision cutting and shaping across a variety of materials, including metals, plastics, and composites. Featuring precision-ground teeth, it is designed to deliver smooth, accurate cuts while minimizing burr formation and ensuring superior surface finish quality. Its durable construction offers enhanced heat resistance, making it an ideal choice for demanding high-speed machining operations such as slotting, grooving, and profiling.

Technical Specifications

Compatible Materials

- Metals
- Plastics
- Composites

Key Features

Precision-ground teeth • Heat resistant • High-speed machining ready

Material	High-Speed Steel (HSS)
Primary Applications	Slotting, Grooving, Profiling
