

# High-Velocity Air Mover for Drying and Ventilation

This high-velocity air mover is designed for rapid drying and ventilation. It has a multi-speed control, compact design and an integrated handle for portability.

## Product Overview

### High-Velocity Air Mover

This high-velocity air mover is engineered for rapid drying and effective ventilation across diverse professional environments. Its robust construction ensures long-term durability, while the powerful motor delivers high-volume airflow for maximum efficiency. Designed with portability in mind, the unit features a compact form factor and an integrated handle, making it an ideal solution for water damage restoration, carpet drying, and general air circulation.

## Performance

### Performance Metrics

#### 1 High-Velocity

Motor Type

### Airflow Settings

Multi-speed control

## Design & Utility

### Portability

Compact Design, Integrated Handle, Easy Storage

## Applications

### Typical Applications

- Water damage restoration
- Carpet drying
- General air circulation
- Ventilation
