

Highway Road Construction Roller

This heavy-duty road roller compacts the ground, preparing it for paving. It is used in highway engineering work to create a solid foundation for durable roadways.

Overview

Professional Highway Road Construction Roller

This heavy-duty road roller is engineered for demanding highway construction and infrastructure maintenance projects. Designed for superior ground compaction, it ensures a stable and durable foundation for high-traffic paving. Its robust build quality makes it an essential asset for professional road work environments.

Technical Specifications

Weight Class

14 t

Operating Weight

Key Capabilities

Ground Compaction, Highway Engineering, Road Maintenance, Infrastructure Development

Equipment Type

Single Drum Vibratory Roller
