

Hoist Trolley for I-Beams

The GCT 610 series hoist trolley is designed for smooth and reliable horizontal movement of loads along an I-beam or similar track. Featuring durable construction with precision bearings, it ensures efficient load distribution and minimizes friction.

Product Overview

Industrial Plain Trolley

The GCT 610 series hoist trolley is engineered for the smooth and reliable horizontal movement of heavy loads along I-beam tracks. Featuring a durable construction with precision bearings, this unit ensures efficient load distribution while minimizing operational friction. It is designed for versatility, equipped with adjustable flanges to accommodate various beam widths, making it a robust solution for a wide range of industrial lifting and material handling applications.

Series

GCT 610

Key Features

Operational Benefits

- Stable running performance
- Enhanced safety braking
- Advanced structural design
- Easy and intuitive operation
- Economical maintenance

Application

Usage

Industrial Lifting, Material Handling, I-Beam Transport
