

Horizontal Metal Cutting Bandsaw

This horizontal bandsaw is engineered for cutting metal. It incorporates a swivel head for angled cuts and a hydraulic downfeed for controlled cutting pressure.

Product Overview

Professional Horizontal Metal Cutting Bandsaw

The BS-912GR is a robust horizontal bandsaw engineered for high-precision metal cutting in industrial and workshop environments. It features a swivel head for versatile angled cuts and a hydraulic downfeed system that ensures controlled, consistent cutting pressure. With integrated coolant systems and variable speed control, this machine is designed to handle a wide variety of materials efficiently while maintaining blade longevity.

Performance Metrics

Key Capabilities

9 inch

Max Capacity

12 inch

Max Width

Technical Features

Cutting Control System

- Hydraulic downfeed for controlled pressure
- Variable speed control for material adaptation
- Swivel head for angled cutting operations
- Integrated coolant system for heat reduction

Operation Mode

Horizontal

Construction & Design

Build Quality

Robust heavy-duty construction for industrial stability

Applications

Suitable Environments

Industrial Settings • Metalworking Workshops • Fabrication Shops
