

Horizontal Pipeline Centrifugal Pump

This robust centrifugal pump is designed for a variety of industrial applications. The horizontal configuration allows for easy installation and maintenance.

Product Overview

High-Efficiency Horizontal Pipeline Pump

The Horizontal Pipeline Centrifugal Pump is a robust and efficient solution engineered for demanding industrial environments. Featuring a horizontal configuration, this unit is designed for streamlined installation and straightforward maintenance. It incorporates a closed impeller for optimal efficiency and a sturdy motor built for continuous, reliable operation in critical systems.

Technical Specifications

Configuration	Horizontal
Impeller Type	Closed
Connection Method	Flanged

Application & Usage

Suitable Applications	Water Transfer, Pressure Boosting, Circulation Systems
-----------------------	--

Performance Features

Operational Features

- High efficiency closed impeller
- Continuous duty motor
- Secure flanged piping connections
- Easy maintenance design
