

# Horizontal Plastic Injection Molding Machine

Horizontal plastic injection molding machine designed for manufacturing plastic parts. Features include a hopper for plastic pellets, an injection unit, and a clamping unit for mold closure.

## Overview

### Horizontal Plastic Injection Molding Machine

This horizontal plastic injection molding machine is engineered for efficient, high-precision manufacturing of plastic components. It features a robust design incorporating an integrated hopper for plastic pellets, a high-performance injection unit, and a reliable clamping unit for secure mold closure. Its versatile configuration makes it an ideal solution for processing various plastic materials across a wide range of production volumes.

## Technical Specifications

Model Identifier	K355
Machine Type	Horizontal Injection Molding

## Key Features

### Core Components

- Plastic pellet hopper
- Injection unit
- Clamping unit

Application Suitability	Plastic Part Manufacturing, Various Materials, Flexible Production Volumes
