

Horizontal Spiral Loop Forming Machine

This horizontal spiral loop machine forms continuous loops of metal reinforcement. It features adjustable settings for loop diameter and pitch, along with safety mechanisms.

Overview

Horizontal Spiral Loop Forming Machine

This horizontal spiral loop machine is expertly designed for the continuous forming of metal reinforcement loops. Built with heavy-duty steel and a robust drive mechanism, it is engineered for high-volume production environments. The system features a large rotating platform with a central mandrel, ensuring uniform loop formation through precise guides and rollers.

Key Features

Production Capabilities

- Uniform loop formation
- Adjustable loop diameter
- Adjustable pitch settings
- High-volume production capacity

Safety & Construction

Safety Features	Emergency Stop, Protective Guarding
Construction Material	Heavy-duty steel

Design Details

Forming Mechanism	Rotating platform with central mandrel
