

Horizontal Split Case Centrifugal Pump

This horizontally split case centrifugal pump is designed for high-capacity fluid transfer applications. Its robust construction features a cast iron casing and a dynamically balanced impeller for smooth operation.

Product Overview

High-Capacity Horizontal Split Case Pump

This horizontally split case centrifugal pump is engineered for demanding high-capacity fluid transfer applications. Its robust cast iron casing ensures long-term durability and resistance to corrosion, while the dynamically balanced impeller guarantees smooth, vibration-free operation. Designed for reliability in continuous service, the split case architecture allows for efficient maintenance and quick access to internal components.

Technical Specifications

Casing Material	Cast Iron
Connection Type	Flanged
Coupling Type	Flexible coupling

Operational Features

Key Features	Dynamically Balanced Impeller, Split Case Design, Continuous Operation, High Reliability
--------------	--

Applications

Suitable Applications

- Water supply
- Irrigation
- Process fluid transfer
