

# Horizontal Water Pressure Tank

Horizontal pressure tank maintains consistent water pressure in residential and commercial systems. It features durable steel construction with a corrosion-resistant coating and a pre-charged air bladder.

## ADDITIONAL IMAGES

## Product Overview

### Professional Horizontal Pressure Tank

This horizontal pressure tank is engineered to maintain consistent water pressure in both residential and commercial water systems. Constructed with durable steel and a corrosion-resistant coating, it is designed for longevity and reliable performance. The unit features a pre-charged air bladder to minimize pump cycling, making it an ideal component for well pump and booster pump applications.

## Technical Specifications

Maximum Pressure	8 bar
Maximum Temperature	99 °C
Connection Size	3/4" - 1" G
Pre-charged Air Pressure	1.5 - 1.8 bar

## Performance Data

### Model Specifications

Capacity (L)	Diameter (mm)	Height (mm)
8	200	220
19	265	300
24	265	300
36	385	430
50	390	430
60	455	500
80	455	500
100	455	500

## Features

### Compatible Applications

- Well pumps
- Booster pumps
- Pressure switches
- Pressure gauges

### Key Features

Corrosion-resistant coating, Durable steel construction, Pre-charged air bladder, Pump cycling reduction, Easy installation
