

Household Reverse Osmosis Water Purification System

This multi-stage water purification system is designed for household use. It removes sediment, chlorine, organic compounds, and other impurities from water, providing clean and safe drinking water.

Overview

Professional Household Filtration

This compact water purification system is engineered for under-sink installation, providing a multi-stage solution for residential water quality improvement. The system integrates PP sediment filtration, CTO carbon processing, and advanced reverse osmosis membrane technology to effectively reduce impurities, chlorine, and organic compounds. Designed for efficiency and performance, it includes a built-in booster pump to ensure consistent pressure and optimal purification results for clean drinking water.

Technical Specifications

Physical Dimensions

370 mm

Height

350 mm

Width

130 mm

Depth

Filtration Stages

- PP Pre-filter (Sediment)
- CTO Carbon Filter
- Reverse Osmosis Membrane

System Features

Under-sink Installation, Booster Pump Included, Compact Design
