

Human Body X-Ray Inspection Equipment

This equipment is designed for human body X-ray inspection to detect concealed materials at security checkpoints. It can be deployed at ports, border crossings, airports, and stations.

Product Overview

Advanced Human Body Inspection

This human body X-ray inspection equipment is designed for high-security environments requiring precise screening. It features a robust, industrial-grade construction capable of handling high traffic volumes while maintaining operational reliability. The system is engineered to provide efficient screening with optimized power consumption and a spacious inspection channel.

Physical Dimensions

Weight	800 kg
Overall Dimensions (L x W x H)	2427 x 1852 x 2449 mm
Channel Size (W x H)	700 x 2000 mm

Electrical Specifications

Power Consumption

1 kVA

Power Consumption

Power Source	220VAC (+10% ~ -15%), 50Hz ± 3Hz
