

HVAC Filter Cartridges

These high-efficiency filter cartridges are designed for refrigeration and ventilation systems. The filters ensure optimal performance and longevity of compressors by removing contaminants such as particulate matter, moisture, and oil.

Overview

High-Efficiency HVAC Filtration

These high-efficiency filter cartridges are engineered specifically for demanding industrial and commercial refrigeration and ventilation systems. By effectively removing contaminants such as particulate matter, moisture, and oil, they play a critical role in maintaining optimal performance and extending the service life of compressors. Their robust construction and pleated design maximize surface area for superior filtration efficiency.

Technical Specifications

Design Features

- Pleated design for increased surface area
- High contaminant removal efficiency
- Durable material construction
- Engineered for compressor protection

Contaminants Removed

Particulate Matter • Moisture • Oil

Primary Applications

Refrigeration, Ventilation, Industrial HVAC, Commercial HVAC
