

HVAC&R System Safety Valve

This safety valve is designed for HVAC&R applications, offering overpressure protection in fluid systems. It is constructed from brass and features threaded connections for easy installation in various HVAC&R systems.

Product Overview

Professional HVAC&R Overpressure Protection

This safety valve is designed specifically for HVAC&R applications, providing essential overpressure protection for fluid systems. Constructed from durable brass with a red adjustment cap, it features standard threaded connections for seamless integration into existing infrastructure. The valve is engineered to automatically release excess pressure, ensuring long-term system integrity and helping to prevent costly equipment damage.

Technical Specifications

Material	Brass
Valve Category	Safety Relief Valve
Key Features	Overpressure protection, Automatic release, Threaded connections, HVAC&R compatible
