

Hybrid Injection Molding Machine

This high-performance hybrid machine is engineered for precision and efficiency. It combines hydraulic and electric drive systems to optimize energy consumption and cycle times.

Overview

High-Performance Hybrid Injection Molding

This hybrid injection molding machine is engineered for precision and efficiency in demanding production environments. By combining hydraulic and electric drive systems, it optimizes energy consumption while maintaining high cycle speeds. The system features a robust clamping unit and a precise injection unit with advanced control, ensuring excellent repeatability and consistent part quality across a wide range of plastic materials.

Technical Specifications

Drive System	Hybrid (Hydraulic and Electric)
Key Features	Energy Efficient, High Precision, Robust Clamping, Advanced Control
