

Hydrated Lime Production Line

This hydrated lime production line is designed for efficient and high-volume processing. The system integrates feeding, calcination, hydration, classification, and packaging stages.

System Overview

High-Efficiency Hydrated Lime Production

This industrial-grade hydrated lime production line is engineered for high-volume processing and superior product quality. It features an intelligent digestion system and advanced dust collection to ensure environmental compliance and high material purity. With adjustable fineness settings and optimized energy consumption, this system provides a reliable and efficient solution for large-scale lime production requirements.

Performance Metrics

Production Capacity

30 t/h

Max Capacity per Unit

Particle Distribution

Uniform

Product Fineness

80 - 600 mesh

System Features

Dust Collection System

- Water filter
- Pulse bag filter

Digestion System

Intelligent water distribution system

Slag Removal

Yes

Energy Efficiency

Efficiency Highlights

- Low energy consumption per machine
- Low energy consumption per ton
