Product Overview

Industrial Hydraulic Punching Solution

This hydraulic metal hole punching machine is a professional-grade tool designed for precision punching in metal sheets and structural profiles. Engineered for durability and stability, its robust construction supports demanding metalworking applications in fabrication, construction, and maintenance environments. The machine features an intuitive design for efficient operation, including quick tool-change mechanisms for both upper and lower dies.

Key Applications

- Metal sheet hole punching
- Profile metalworking
- Industrial fabrication
- Metal forming and shearing

Certifications

Certifications & Standards	CE, GS
----------------------------	--------

Operation & Maintenance

Tooling Mechanism

Component	Operation Method
Upper Tool	Rotating silver locking collar for installation and removal
Lower Tool	Secured using a hexagonal wrench
