

# Hydraulic Pipe and Tube Clamps

These hydraulic clamps are designed for securing pipes and tubes in hydraulic systems. Constructed from aluminum and plastic, the clamps offer durability, corrosion resistance, and reliable support.

## ADDITIONAL IMAGES

## Overview

### Versatile Hydraulic Pipe & Tube Clamps

These hydraulic pipe and tube clamps provide a robust and reliable solution for securing hydraulic systems, offering excellent vibration dampening and stability. Designed with a split-body structure for easy installation and maintenance, they are suitable for a wide range of industrial applications. The clamps are constructed from high-quality materials like aluminium and polypropylene to ensure long-term performance and corrosion resistance in demanding environments.

## Technical Specifications

### Outer Diameter Range

**6 mm**

Min O.D.

**805 mm**

Max O.D.

### Working Temperature Range

Material	Min Temp	Max Temp	Typical Color
Polypropylene (PP)	-30°C	+90°C	Dark Green
Polyamide (PA)	-40°C	+120°C	Dark

## Material & Construction

### Assembly Components

- Cover Plate
- Weld Plate
- Clamp Body
- Hexagon Bolts

### Hardware Materials

- Carbon Steel (Zinc Coated)
- Carbon Steel (Phosphated)
- Stainless Steel

### Clamp Body Materials

Polypropylene (PP), Polyamide (PA), Aluminium (AL)

## Performance Features

### Key Benefits

Vibration Dampening • Corrosion Resistant • High Pressure Support • Easy Installation
