

Hydraulic Press Brake for Metal Forming

This hydraulic press brake is designed for precision metal forming, bending, and shaping of metal sheets. It features a robust frame, hydraulic system, and programmable control for accurate and repeatable bending.

Product Overview

Precision Metal Forming Solution

This hydraulic press brake is a professional-grade machine engineered for accurate bending, folding, straightening, and leveling of metal sheets and plates. It features a robust, stable frame and a high-performance hydraulic system for consistent, controlled bending force. Designed for efficiency, the machine integrates advanced automated control systems to simplify programming and ensure repeatable, high-quality results across various industrial applications.

Control Systems

Supported CNC Systems

- Swiss Cybelec DNC
- Holland Delem DNC

Automation Capabilities

Automatic Bend Ordering, Automatic Inspection, Diagnostic System, Programmable Sequences

Operational Capabilities

Primary Operations

Bending • Folding • Straightening • Leveling

Safety Equipment

- Light Curtains
- Emergency Stop Buttons
