Product Overview

Professional Hydraulic Rebar Cutter

This hydraulic steel bar cutter is a powerful and efficient tool engineered for cutting steel reinforcement bars (rebar) on demanding construction sites. Its robust hydraulic system delivers high cutting force, ensuring clean and precise cuts for various structural applications. Designed with portability in mind, this compact unit is easy to transport and maneuver, making it an ideal solution for bridge, building, and road construction projects.

Technical Specifications

Model Number	BT-RC20C
Power Source	Electric Motor

Key Features

Usability

- Compact and portable design
- High cutting force
- Durable cutting blades
- Safety features for operator protection

Primary Applications	Building Construction, Bridge Construction, Road Construction, Mechanical & Hardware
----------------------	--
