

Hydraulic Steering Component

This hydraulic component is a part of an automotive system, possibly for steering or braking. It features a circular central mechanism encased in a metallic housing with mounting flanges.

Product Overview

Hydraulic Steering Component

This hydraulic steering component is designed for automotive systems, featuring a robust metallic housing and a circular central mechanism. It includes integrated mounting flanges for secure installation and is engineered to handle complex hydraulic functions. The assembly incorporates essential seals and internal components to ensure reliable performance within the steering or braking system.

Physical Characteristics

Design Features

- Circular central mechanism
- Integrated mounting flanges
- Complex hydraulic assembly

Component Category	Hydraulic Steering/Braking System
Construction	Metallic Housing, Internal Seals, Mounting Flanges

Documentation

Production Date Stamp	2009-11-24
