

Hydraulic Waste Paper Baler

This hydraulic waste paper baler compresses waste paper, cardboard, and plastic film into compact bales. Its robust steel frame and hydraulic system ensure efficient compression, minimizing storage and transportation costs.

Product Overview

Industrial Waste Compaction Solution

This hydraulic waste paper baler is engineered for high-efficiency compression of waste paper, cardboard, plastic film, and other recyclable materials. Featuring a robust steel frame construction, it ensures long-term durability and operational stability in demanding industrial environments. The powerful hydraulic system creates high-density bales, significantly reducing storage footprint and lowering transportation costs for recycling centers, printing plants, and packaging facilities.

Technical Specifications

Frame Construction	Robust Steel Frame
Power Source	Electric Motor
Suitable Applications	Recycling Centers, Printing Plants, Packaging Facilities, Industrial Waste Management

Safety & Operation

Safety Features

- Emergency stop buttons
- Safety interlocks

Control System	Simple control panel
----------------	----------------------
