

IGBT Inverter MIG/MMA Welding Machine

This is a versatile welding machine designed for MIG and MMA welding processes. It features IGBT inverter technology for efficient and stable welding performance.

Product Overview

Versatile Welding Performance

This IGBT inverter welding machine is engineered for professional versatility, supporting both MIG (Metal Inert Gas) and MMA (Manual Metal Arc) welding processes. Designed with a single PCB architecture for reliability, it offers intuitive controls for precise adjustment of voltage, wire speed, and amperage. The unit is optimized for efficiency, featuring gas and gasless welding capabilities and a robust 2-roller wire feeder system.

Technical Specifications

Technology	IGBT Inverter
Welding Processes	MIG, MMA, Gas, Gasless
Power Input	Single Phase
PCB Design	Single PCB

Feed System

Wire Spool Capacity	300 mm
Wire Feeder Rollers	2

Control Interface

Adjustable Parameters

- Voltage
- Wire Speed
- MMA Amperage
