

Impact Crusher for Aggregate Production

This impact crusher is designed for high profits, low costs and energy saving. The CI5X series impact crushers are ideal upgrade of conventional crushing equipment.

Overview

High-Efficiency Impact Crusher

The CI5X series impact crusher is engineered to deliver high-profit, low-cost aggregate production through advanced crushing technology. Designed to overcome the limitations of conventional equipment, this machine provides superior crushing efficiency for both coarse and medium-fine applications. Its robust construction and intelligent design make it an ideal upgrade for modern mining, recycling, and construction operations.

Key Advantages

Core Advantages

- Multi-functional fully-hydraulic operating system
- Great-rotation-inertia high-precision rotor
- High-efficiency involute-shaped crushing chamber
- High standard raw materials for durability
- Ergonomic design to reduce operational costs

Applications

Suitable Applications

Aggregate Production, Mining, Recycling, Coarse Crushing, Medium-Fine Crushing

Technical Specifications

Design Highlights

Hydraulic System • High-Precision Rotor • Involute Chamber • Energy Efficient

Model Series

CI5X Series
