

Industrial Air Conditioning Ductwork System

This industrial air conditioning ductwork system is engineered for efficient air distribution. It incorporates rectangular galvanized steel ducts with adjustable louvers and support structures, suitable for large commercial or industrial spaces.

Overview

Industrial Air Conditioning Ductwork System

This industrial air conditioning ductwork system is engineered for high-efficiency air distribution in large-scale commercial and industrial environments. Constructed from durable galvanized steel, the system features a modular design with rectangular duct sections, adjustable louvers, and robust support structures. It provides a reliable solution for maintaining optimal climate control across expansive facilities.

Construction & Design

System Components

- Rectangular duct sections
- Adjustable louver vents
- Ceiling suspension support structures

Material	Galvanized Steel
Duct Shape	Rectangular

Application

Suitable Environments	Commercial Spaces, Industrial Facilities, Large-scale Warehousing
Installation Method	Ceiling Suspended
