

Industrial Asynchronous Electric Motor

This asynchronous motor is designed for demanding industrial applications. It offers robust construction, efficient operation, and reliable performance for pumps, fans, and compressors.

Product Overview

Industrial Performance

The YKK asynchronous motor is engineered for high-performance in demanding industrial environments. It features a robust, durable enclosure and an optimized cooling system to ensure reliable operation under heavy loads. Designed for versatility, this motor is an ideal solution for powering pumps, fans, compressors, and various other pieces of heavy-duty machinery.

Key Features

Design Highlights

- Durable enclosure for harsh environments
- Optimized cooling system
- High starting torque
- Designed for continuous duty cycles

Application

Compatible Machinery

Pumps, Fans, Compressors, Heavy-duty Machinery

Operating Conditions

Operational Suitability

Continuous Operation • Harsh Environments
