

Industrial Axial Fan 400mm 220V

This axial fan is designed for industrial applications requiring efficient ventilation and cooling. Its aerodynamically optimized impeller minimizes noise while maximizing airflow and static pressure.

Product Overview

Industrial Axial Fan 400mm

The 400FZY-61 is a high-performance axial fan engineered for demanding industrial environments. Designed with an aerodynamically optimized impeller, it delivers superior airflow and static pressure while minimizing operational noise. This robust unit is ideal for integration into HVAC systems, textile machinery, and various industrial cooling applications, offering a reliable and compact solution for efficient ventilation.

Technical Specifications

Blade Diameter	400 mm
Power Supply	220V AC

Features

Key Features

- Robust frame and impeller construction
- Aerodynamically optimized blade design
- Compact footprint for easy installation
- High static pressure capability

Applications

Suitable Applications	HVAC Systems, Textile Machinery, Industrial Cooling
-----------------------	---
