

Industrial Ball Valve for Fluid Flow Control

This ball valve is designed to control fluid flow in pipelines. It features a flanged connection for secure installation and a handwheel for manual operation.

Product Overview

Industrial Fluid Control Solution

This industrial ball valve is engineered for reliable fluid flow control in demanding pipeline environments. Featuring a robust design with flanged connections, it ensures secure installation and long-term durability. The integrated handwheel allows for precise manual flow regulation, making it an ideal choice for applications requiring consistent shut-off and throttling capabilities under high-pressure and temperature conditions.

Technical Specifications

Operation Method	Manual
Connection Type	Flanged
Primary Function	Shut-off, Throttling, Flow Regulation

Key Features

Construction

Robust Design • High-Pressure Rated • High-Temperature Resistant
