

Industrial Bearing Units

These bearing units are designed to provide robust support and efficient rotation for shafts in machinery. They feature various mounting configurations, including flange and pillow block styles, ensuring secure attachment and alignment.

Product Overview

Industrial Bearing Units

These industrial bearing units are engineered to provide robust support and efficient rotation for shafts in demanding machinery applications. Available in versatile mounting configurations, including flange and pillow block styles, they ensure secure attachment and precise alignment. Constructed from durable materials, these components are designed to facilitate smooth operation and extended service life across a wide range of industrial environments.

Technical Specifications

Available Model Series

- F207
- T208
- P206
- UH205

Primary Applications

Machinery Components • Industrial Shaft Support • Rotational Systems

Mounting Styles

Flange, Pillow Block
