

# Industrial Centrifugal Pump

This centrifugal pump is engineered for diverse industrial tasks. It is suitable for pumping clean or slightly contaminated low-viscosity fluids, and ideal for water supply, irrigation and HVAC systems.

## Overview

### Industrial Centrifugal Pump

This robust industrial centrifugal pump is engineered for reliability in diverse fluid transfer applications. Featuring a sturdy cast iron casing and a high-efficiency electric motor, it is designed for pumping clean or slightly contaminated low-viscosity fluids. With its closed impeller design and mechanical seal, this unit ensures optimal performance and leak-free operation for water supply, irrigation, HVAC, and general industrial use.

## Design & Construction

Casing Material	Cast Iron
Impeller Type	Closed Impeller
Seal Type	Mechanical Seal

## Installation & Maintenance

Connection Type	Flanged
Mounting Style	Durable Baseplate

## Application Suitability

### Primary Applications

- Water Supply
- Irrigation Systems
- HVAC Systems
- General Industrial Fluid Transfer

Compatible Fluids	Clean Fluids, Slightly Contaminated Fluids, Low Viscosity
