

Industrial Centrifugal Pump

This centrifugal pump is engineered for diverse industrial applications. It features a durable cast iron casing and impeller, ensuring reliable performance for fluid transfer, boosting, and circulation.

Overview

Industrial Centrifugal Pump Overview

This robust industrial centrifugal pump is engineered for high-performance fluid transfer, circulation, and boosting applications. Featuring a durable cast iron casing and impeller, the unit is built to ensure long-term reliability and consistent operation in demanding industrial environments. It is powered by a high-efficiency electric motor, providing precise control and energy-effective performance for various fluid handling tasks.

Construction

Casing Material	Cast Iron
Impeller Material	Cast Iron

Technical Specs

Power Source	Electric Motor
--------------	----------------

Applications

Primary Applications	Fluid Transfer, Boosting, Circulation
----------------------	---------------------------------------
