

Industrial Centrifuge Separator for Liquid Separation

This industrial centrifuge separator is designed for separating liquids of different densities. It is suitable for heavy-duty applications such as oil purification and coolant cleaning.

Overview

Industrial Centrifuge Separator

This industrial centrifuge separator is engineered for high-efficiency liquid separation, specifically designed to handle liquids of varying densities. Its robust construction and integrated pressure monitoring systems make it an ideal solution for demanding industrial environments such as oil purification and coolant cleaning. The unit is built for heavy-duty applications, ensuring reliable performance in engine rooms and similar critical operational settings.

Technical Specifications

Design Features

- Conical top design
- Multiple inlet/outlet piping configuration
- Integrated pressure gauges
- Robust, painted industrial housing

Equipment Type	Centrifuge Separator
Primary Applications	Oil Purification, Coolant Cleaning, Liquid Separation

Operational Readiness

Condition

Well-maintained • Heavy-duty ready
