

Industrial Cyclic Flow Control Valve

This industrial valve controls cyclic flow in demanding applications. Its heavy-duty body features flanged connections and an automated actuator for precise flow regulation.

Overview

Industrial Cyclic Flow Control Valve

This industrial cyclic flow control valve is engineered for robust performance in demanding fluid handling environments. Designed to manage water and oil products, it features a heavy-duty construction suitable for high-volume applications. With a wide range of nominal diameters and reliable pressure handling, it serves as a critical component for precise flow regulation in industrial processes.

Technical Specifications

Nominal Diameter Range	DN 200 – DN 2000
Maximum Operating Pressure	2.5 MPa
Maximum Temperature	80 °C

Applications

Suitable Media	Water, Oil Products
----------------	---------------------

Customization

Available Customizations

- Larger dimensions available on request
- Higher temperature ratings available on request
- Higher pressure ratings available on request
