

Industrial Electric Motor

This electric motor is available in single-phase and three-phase configurations, with speeds of 2800rpm, 1450rpm, 980rpm, and 750rpm. Power options range from 0.18kW to 500kW, making it suitable for driving various industrial machines.

Product Overview

Industrial Performance Motor

This high-efficiency electric motor is engineered for demanding industrial environments, featuring a robust construction with an optimized cooling system. Available in both single-phase and three-phase configurations, it provides versatile power output options to suit various industrial machinery requirements. With a design focused on reliability and extended service life, this motor ensures consistent performance under continuous operation.

Technical Specifications

Rotational Speeds

- 2800
- 1450
- 980
- 750

Power Output Range

0.18 kW - 500 kW

Phase Options

Single Phase, Three Phase

Speed Unit

RPM

Design Features

Construction Highlights

Robust Frame • Ribbed Housing • Optimized Cooling • High-Quality Stator • High-Quality Rotor

Key Performance Metrics

500 kW

Max Power

2800 RPM

Max Speed
